

The Earth – Sea

1st – Read the information.

Questions

2nd – Write down the information so you can understand it.

Presentation is key

Sources

Roughly **70%** of the world is covered by water of which **97.5%** is salted and found in seas and oceans. If all the water on earth were scrunched up into a ball it would be **860km** in diameter. This is about as large as Saturn's ice moon [Tethy's](#). The Pacific Ocean is the largest and deepest ocean on Earth. It spans **60 million miles²** from California to China, and in certain regions extends **tens of thousands of feet** below the surface of the water.

Interesting

- [The Mariana Trench](#) is the deepest part of the ocean and is **11,034m** deep.
- More than **70%** of all volcanic activity occurs underwater.
- **1 litre** of seawater contains **13 billionths of a gram** of gold.
